

ÖGHT Webinar „Ulnar Sided Wrist Pain – Differential Diagnosis“

Webinar Beschreibung:

Wendy Medeiros has dedicated the past 18 years towards enhancing the treatment and understanding of ulnar sided wrist pain. In this webinar, she presents insights on the differential diagnosis of ulnar sided wrist pain injuries with a special focus on Triangular Fibrocartilage Complex (TFCC) tears.

The goal of this webinar is to provide you with a better understanding of ulnar sided wrist pain and the various differential diagnoses that are often encountered in practice. This webinar is furthermore aimed at equipping you with the skills to better serve your patients, and to get them back to work, sport and normal function more effectively.

Goals of the webinar:

- Enhance attendees ability to assess, identify and treat multiple different causes of ulnar sided wrist pain
- Inform attendees of the most up-to-date research within the field of ulnar sided wrist pain and TFCC tears
- Review real-patient cases studies that illustrates the use of research in practice
- Develop a problem-solving attitude towards ulnar sided wrist pain among attendees

Referentin: Wendy Medeiros (CHT, OTR retired)

Wendy Medeiros is the inventor and patent holder of the WristWidget, a solution for those with tears of the Triangular Fibrocartilage Complex. She is an Occupational Therapist with a speciality in hands or CHT- Certified Hand Therapist. After working at the Stanford University Hospital/ Clinics and in private practice she returned to Hawaii to open three clinics, where she invented the WristWidget. Her work now is entirely manufacturing, distribution and research. Her publications focus on non surgical interventions for TFCC lesions and the WristWidget. In addition to her current work, Wendy lectures at national and international conferences and shares her knowledge in educational courses.
